MESSAGE FROM CHAIRMAN

It was with great pleasure that we welcomed you to the "12th International Conference On Applied Analysis And Mathematical Modeling. This conference, which took place in Istanbul, Turkey from July 19-23, 2024, was a hybrid event presented by Biruni University. With a significant turnout of scientists from 29 countries and a total of 230 papers presented, we gathered to discuss the most recent developments, discoveries, and progress in Applied Analysis.

We aimed to delve into the fundamental and frontier theories that act as the backbone of modern science and technology. We hoped to instigate further research interest and explorations into this exciting field. The conference placed a spotlight on the foundational theories and principles, analytical and symbolic approaches, and computational techniques in nonlinear physical science and mathematics. A diverse range of topics was addressed, from nonlinear dynamical systems, nonlinear electronic circuits, and classical and fractional differential equations to nonlinear dynamics in fields such as biology and engineering. We also explored complexity in areas like physics, chemistry, and biomedicine, neurodynamics, social dynamics, data-driven dynamical systems, and mathematical methods in artificial intelligence, among others.

As the number of applications from around the world increased, we faced the challenging task of selecting and categorizing abstracts from numerous participants. We did our utmost to accommodate a wide range of speakers, creating an environment conducive to rich, engaging interactions and exchanges.

We were also delighted to offer a range of social activities including an excursion boat trip and a city tour, providing an excellent opportunity for participants to engage in informal discussions and networking. We were particularly heartened by the robust participation from young researchers, whose presentations contributed significantly to the conference.

The talks covered a wide range of mathematics and its applications such as analysis, algebra, statistics, computer mathematics, discrete mathematics, geometry, and engineering, as well as their use in modeling. We believed that this richness provided the basis for interdisciplinary collaborations.

We want to express our sincere thanks to some key individuals who contributed significantly to the conference's success. Aydin Secer and Dumitru Baleanu, your participation and efforts were truly appreciated. The same goes for Ali Akgul, Yeliz Karaca, Tuğçem Partal, Neslihan Ozdemir, Melih Cinar, Handenur Esen, and Ismail Onder, along with all our colleagues who worked tirelessly for the organization of the conference. In addition, we acknowledged the support and guidance of the chairman of the board of trustees of Biruni University and Prof. Dr. Adnan Yüksel, the Rector of Biruni University, our host institution. We were also grateful to all the plenary speakers who kindly accepted our invitation and dedicated their time to sharing their ideas during the conference.

Our heartfelt appreciation extended to all members of the organizing committee. If any individual or contribution has been unintentionally overlooked or forgotten, we hope for their kind understanding. We sincerely thanked all who put their effort into making this occasion possible.

We were delighted to welcome each and every one of you to this conference. We hope it was an enjoyable and productive experience and look forward to meeting again on future occasions.

Sincerely Yours,
Prof. Dr. Mustafa Bayram,

Abstract: In this study, we elaborated and characterized thin films of undoped and magnesium-doped (1%, 2%, and 3%) cobalt oxide. These films were deposited on ordinary glass substrates at a temperature of 400 °C, with a deposition time of 5 min, using the spray pyrolysis technique. The main objective of this work was to investigate the influence of magnesium doping on the structural, optical, and electrical properties of Co₃O₄. X-ray diffraction (XRD) results showed that all films were polycrystalline with a cubic spinel structure [1-4], and there was a decrease in the crystallite size (D) with increasing doping. The optical transmission spectra of the Mg-doped Co₃O₄ film exhibited high transmittance in the 400 to 500 nm range. Specifically, the electrical resistivity showed a significant decrease, from 8.031 Ω-cm to 0.807 Ω-cm for undoped and 2% Mg-doped films, respectively. However, for Mg concentrations of 3%, the electrical resistivity increased to 0.8217 Ω-cm.

Keywords: Thin films, Mg-doped Co₃O₄, Spray pyrolysis, XRD, Electrical resistivity.
