Abstract – The life of companies in industrialized countries or those in the process of becoming industrialized is characterized by profound changes: technological, economic and social. Eliminating certain types of jobs, these changes pose obvious social problems: you only have to open your usual newspaper to realize this. But they also create new needs that we must identify, then satisfy in terms of training and qualification of the actors, management and especially organization. Maintenance is one of the functions of the company, but it is not an end in itself, it is visible and sometimes unknown to decision-makers who underestimate its impact. And yet, it is becoming an increasingly sensitive component of the company's performance. It is therefore important to make it better known.

The project's interests revolve around industrial maintenance, with an emphasis on the study and evaluation of the industrial maintenance system within companies. More specifically, the project studies the maintenance system in the SKTM company – Tamanrasset province.

Keywords – Maintenance, industrial, production, SKTM - Tamanrasset
